

Multiple Thread Wraps 21

The next step in designs is to use a double box layout. This means a box layout with another box outside of it. Now you will have four threads going up the rod and four threads coming back down the rod. Here is an example:

The white wraps IN one thread at a time from the center box.
The green wraps OUT one thread at a time from the center box.
The orange wraps OUT --TWO threads at a time from the outer box.

A variation would be to use a plus-1 method with the white, which gives a center circle, or use a plus-1 method with the orange to give a more pointed 4-point white star.
