

Thunderbird

Build the head and body on threads 1 & 2 as a horizontal split center diamond and wrapping one thread at a time. May use red under-wrap for body fill if needed. Once the head and body are the appropriate size, build the tail and wings at the same time using 3 threads each pass for the feathered look. The tail is formed on threads 3 & 4 with red wrapping OUT and black wrapping IN. The wings are finished off on threads 5 & 6 by black wrapping OUT, 3 threads at a time.

Multiple Thread Wraps 24 Continued

After the bird is completed frame with a chevron or diamond wrap. Other variations can be metallic thread highlights, shaded backgrounds or different bird effects.
