

### Four-Corner Thunderbird

Once you have mastered the single thunderbird, then try this one.

The layout is side by side thunderbird layouts, which allows you to build all four at the same time. Step one is to for the split center head by green wrapped OUT and yellow wrapped IN. Step two is forming the tail and wings by yellow wrapped OUT for the tail & wings, red wrapped IN to outline the tail and red wrapped OUT (later changed to black) to outline the wings and make the center black cross.

Well, now is probably the best time to end this project on Cross Wraps! The goal was to help the builder obtain a better knowledge of how these patterns are created and to stimulate the desire to try doing this type of decoration. Good luck with your endeavors and remember that if you come up with some new patterns be sure to share them with others, especially me!!
